

UNCLASSIFIED
Foreword

(U) The FY 2007 President's Budget Request for the Military Intelligence Program (MIP) is presented in this Congressional Justification Book (CJB). This is the first year for the MIP CJB. Volume I contains summary budget information for MIP. The MIP is organized by Component, with a Component Manager who develops and presents the proposed programs and budgets through the Department's Planning, Programming, Budgeting and Execution (PPBE) system. The MIP Congressional Justification Book is organized by MIP Component and presented in the following volumes:

Volume II - Army MIP,

Volume III - Navy MIP,

Volume IV - Air Force MIP,

Volume V - Marine Corps MIP,

Volume VI - Defense Wide MIP, (CIFA, DIA, NGA, NSA, OSD and SOCOM)

Volume VII – Compartmented Annex (Army, Navy, and NRO).

(U) Each Volume contains the programmatic and resource details concerning the individual projects within a MIP Component. For projects with multiple component funding, we are including the description and total resources in each components volume.

(U) In accordance with Congressional language, all identifiable costs have been included in the MIP program submissions.

UNCLASSIFIED

2

Introduction

(U) DOD's intelligence effort and the MIP serve two purposes. First, they assist the Secretary of Defense – and by extension his senior subordinates, military and civilian – in the discharge of his responsibility to anticipate and prepare for and, should dissuasion and deterrence by the U.S. Government fail, direct military operations, and, in the aftermath of those operations, provide requisite support to other elements of the U.S. Government to manage the effects of those military operations. Second, they provide the Director of National Intelligence (DNI) a highly responsive capability to assist him in discharging his responsibility for providing national intelligence to the President, the rest of the Executive Branch, and the Congress.

(U) DOD's intelligence effort is focused on three types of activity:

- (U) That which is uniquely associated with DOD's mission or is fundamental to it, e.g., tactical human intelligence teams, operational preparation of the battlespace, advance force operations, or counterintelligence activities by the Military Departments for force protection overseas;
- (U) That which may support either the Secretary of Defense or the DNI as each executes his mission, e.g., U-2/Global Hawk systems, the activities of SOCOM's Special Mission Unit, or Imagery and Signals Intelligence operations in support of a Chemical-Biological-Radiological-Nuclear-Explosive (CBRNE) render safe mission;
- (U) That which is uniquely associated with the DNI's mission or is fundamental to it and is executed by direction of the DNI through agencies or personnel within DOD, e.g., most obviously NSA, NGA, NRO and DIA for the collection or analysis of foreign intelligence, or the support to foreign instrumentation collection provided by Cobra Judy or Cobra Dane.

(U) On balance, the DOD intelligence effort is weighted toward the first two types of activity. With respect to the third--the DNI's specific mission--the Secretary has responsibility under the Intelligence Reform and Terrorism Prevention Act, such as serving as a member of the Joint Intelligence Community Council, the exercise of joint milestone decision authority with the DNI, or providing to the DNI a statement of departmental needs and requirements for consideration in the National Intelligence Program (NIP). But these are responsibilities assigned to the Secretary in the context of support to national intelligence activities, which the DNI oversees, serving as the President's prime staff intelligence adviser and determining the NIP. The first

two are rooted in the Secretary's responsibilities within the chain of command from the President to the Combatant Commanders (COCOMs).

(U) DOD Intelligence Efforts

(U) The COCOMs and their subordinate Joint Task Force (JTF) Commanders have led the demand to adapt the organization, process and products of DOD's intelligence efforts. They recognize that intelligence is now a Command function, and that "actionable" intelligence can be created by operators directed by analysts who in turn can help operators achieve the mission objective. Translating the Commanders' experiences, their "lessons learned," into useable and effective capability is one of the responsibilities of the Office of the Under Secretary of Defense for Intelligence (OUSDI). Toward that end, a number of initiatives are being pursued.

(U) Intelligence Campaign Plans

(U) Intelligence Campaign Plans (ICPs) are under development as part of DOD's adaptive planning process. That process yields operations plans (OPLAN) for a variety of scenarios and contingencies. ICPs are the intelligence component of the operation plan. An ICP will identify what a COCOM might need to know to avoid surprise or extend warning time. It will identify resources – people, platforms, collection capabilities, and critical skill sets such as language and cultural expertise – the COCOM believes are needed to support the military operation. And, it will provide an estimate of support for the post-conflict period.

(U) Unlike the larger OPLAN, however, the ICP might identify activities or operations that might yield needed information, subtly affect the calculus of a potential opponent or disrupt his intended operations before they gather momentum. For these reasons, execution of the ICP might occur well in advance of a crisis or conflict.

(U) ICPs are also the vehicle by which a Commander will present his intelligence requirements, identify the extent to which assets organic to the Command or the Department can meet that need, and identify gaps in capability or knowledge, or both, which can be presented and justified to the DNI to be addressed by national systems. As a result, ICPs will offer--for the first time--a regularized process by which Commanders can present to DOD, and DOD can present to the DNI, their needs.

(U) Joint Intelligence Operations Centers (JIOCs)

(U) New times require new organizations to meet new demands. The JIOC concept has been developed in coordination with and the assistance of the DNI's senior staff and the Agency directors. The COCOMs and Military Departments

Introduction

are in the last stages of coordinating an order to establish a JIOC in each Command and at DIA headquarters.

(U) At the October 2005 Combatant Commanders conference, COCOMs all agreed that recent experiences have demonstrated the speed, power, and combat effectiveness that can be achieved by closely aligning intelligence with traditional operations and plans functions. JIOCs are designed to effect that alignment and transition of intelligence from a "staff" to a "Command" function. As such, it will incorporate appropriate elements of the Joint Intelligence Centers and Joint Analysis Center (JICs and JAC) currently within the Commands. The JIOCs will fully integrate all intelligence functions and disciplines and enable commanders to plan and execute more agile and responsive operations before, during and after a crisis or conflict.

(U) The JIOCs will align -- under one chain of command -- collection, analysis, information management, and Intelligence, Surveillance, and Reconnaissance (ISR) operations with force operations. It will be the organization that develops the ICPs. JIOCs will be an interdependent, operational intelligence organization at the Defense, theater, COCOM and JTF levels, integrated with national intelligence and capable of accessing all sources of intelligence impacting military operations, planning, and execution.

(U) The Defense JIOC, led by Director, DIA, will be the lead DOD intelligence organization for coordinating intelligence support for the Combatant Commanders. It will adjudicate competing military intelligence demands and allocate resources among the Commands, to include, in conjunction with the DNI, the relative weight of effort among the combat support agencies, and the service intelligence centers operating in support of military missions. To enhance his role, the DIA Director has been assigned, in addition to his role as DOD Collection Manager for NIP purposes, the ISR Component Commander for USSTRATCOM. As such, he has the authority to direct DOD's organic air and naval collection areas. In addition, he has been given increased responsibility for human intelligence (HUMINT) within DOD. We believe this combination will permit the Defense JIOC to integrate, horizontally and vertically, DOD collection and analysis.

(U) In addition, the DNI is planning to locate an element of his collection management team within the Defense JIOC. This will permit real-time deconfliction of COCOM requests for national intelligence support with those of other agencies and ensure that national collection tasking is appropriately distributed among DOD organic capabilities to meet the DNI's needs.

(U) We believe these initiatives will ensure that DOD's leadership and its forces are effective in carrying out DOD's primary mission of anticipating, preparing for, and conducting military operations along the continuum of crisis and conflict, and supporting any post-operational activities in which they might be engaged. In particular, they support what Secretary Rumsfeld has described as the Find, Fix, and Finish mission.

(U) Persistent Surveillance

(U) The key to the "Find" and "Fix" efforts is persistent surveillance. Field commanders often refer to this as the "unblinking eye." Emblematic of this capability is Predator, which can, literally, stare without blinking at a target or activity for an extended period of time. The DOD continues to pursue at the operational and strategic level of activity the analog to this tactical-level "unblinking eye" which provides a very narrow field of view--akin to looking through a soda straw. The laws of physics are such, however, that the wider the field of view one desires, the higher the platform needs to be or the heavier it needs to be -- or both. This poses considerable technical challenges. To help meet those challenges, DOD has great interest in bringing the capabilities of such systems as Global Hawk on line and moving forward on the Space Radar.

(b)(1)

(S//NF) (b)(1)

(b)(1)

(U) MARSOC

(U) The Department has committed to expanding our special intelligence capabilities as part of the establishment of the Marine Corps Special Operations Command (MARSOC), which has an intelligence support component as part of its Marine Special Operations Support Group subordinate command. MARSOC will stand up its intelligence collection capability in FY 2006, and will deploy task organized intelligence teams from elements within the MARSOC beginning

in FY 2007. These teams will provide the MARSOC Commander an all-source collection and analysis capability and the ability to conduct intelligence reachback to MARSOC headquarters.

(U) In order to implement the MARSOC in the FY 2007 budget, the Marine Corps made adjustments within its topline, including a reduction to the Marine Corps MIP of approximately \$30 million – which equates to roughly 10% of the FY 2007 MARSOC budget. In addition, roughly 9% of MARSOC’s billets – 29 in FY 2006 -- are intelligence billets. These billets will facilitate the stand up of the MARSOC headquarters G-2, a small planning staff at the intelligence company, and will provide the first two deploying Marine Corps Special Operations Companies (MSOCs) an initial intelligence collection capability. These MSOCs will pull their remaining intelligence enablers from the Marine Expeditionary Unit S-2 staffs until they can be fully sourced beginning in FY 2007. It will take four years to source all intelligence billets in MARSOC.

(U) The DOD has worked hard since 2001 to improve the intelligence capabilities, activities and operations in the Department, and we are proud of the progress we have made. The nexus of the ICPs, the Defense JIOC, the COCOM JIOCs, DOD’s organic intelligence and counterintelligence capabilities, and the expanded role of DIA, all operating under updated policy and the guidance, direction and oversight of the Secretary of Defense and DNI, brings improved coherence to DOD’s intelligence efforts.

(U) The Military Intelligence Program

Previously, DOD’s intelligence efforts were funded through the Joint Military Intelligence Program (JMIP) and Tactical Intelligence and Related Activities (TIARA). These resource structures were an ineffective construct for managing DOD intelligence capabilities and assets. With the active participation and support of the DNI, the Deputy Secretary of Defense established the Military Intelligence Program (MIP). The MIP has been built with transparency and order that ensures the Department, DNI and Congress can understand and assess – arguably for the first time – the allocation of resources to meet COCOM and leadership needs; identify what DOD provides to the DNI; and identify gaps to be filled first through the MIP or other DOD resources, and lastly through a request for support from the DNI.

(U) The MIP assessments will be based in part on the outputs of the ICP process. ICPs will identify the COCOM’s end-to-end intelligence needs. As such, those needs will form the point of departure for resourcing decisions in the MIP. However, other considerations, related to, among others, technology maturation, shifting defense priorities, adjustments in national strategy and

Introduction

guidance from the DNI will be weighed in resourcing decisions. Because MIP resources support DOD intelligence capabilities, it is essential that they not be diverted to pay for lower priority, non-intelligence DOD activities. Accordingly, the Deputy Secretary designated the USDI as the MIP Program Executive. USDI approval is required before funds can be diverted to other uses over the life of the program and in the year of execution.

~~(S//NF)~~(b)(1)
(b)(1)

(U) The QDR, FY 2007 and Beyond

(U) The decisions resulting from the QDR emphasized four key areas for ISR:

1. Capability-centric ISR;
2. Responsive ISR;
3. Increased counterintelligence and tactical HUMINT coverage and support; and,
4. Fusion of all-source intelligence with operational planning.

(U) 1. Capability-centric ISR

(U) As the QDR notes, warfighters and decision makers alike depend on the full range of intelligence capabilities to satisfy their needs. For that reason, the DOD will seek suites of capabilities, focusing in the first instance on the kind of data being sought, rather than which platform or from which medium collection should occur. This places an emphasis on sensor types, where they might best be located and the analytic and command and control support they require to be effective. We believe this approach will result, over time, in a more seamless interaction among warfighters, planners and intelligence operators by employing an integrated approach to execute the mission rather than tasking a particular aircraft, ship, satellite, submarine or ground sensor. It can, over time, result in an analysis-collection-analysis cycle in which analysis drives collection and collectors have access to the full panoply of capability to meet demand.

(U) 2. Responsive ISR

(U) This more seamless approach to the analysis-collection-analysis cycle and capabilities will take time to develop and implement. In the meantime, DOD

will continue to develop planned and programmed capabilities to fit into this emerging approach.

~~(S//NF)~~(b)(1)
(b)(1)

(U) Overhead surveillance has a number of attributes that distinguish it from systems that operate within the atmosphere. It is, for example, invaluable for focusing on areas of interest in or near denied areas. The value of overhead assets is known to our adversaries. Hence, their vulnerability is a matter of concern. The DOD has the mission to defend U.S. assets in space through a variety of measures, and consequently, the Department is making investments to protect and safeguard ISR assets in space.

~~(S//NF)~~(b)(1)
(b)(1)

~~(S//NF)~~(b)(1)
(b)(1)

Introduction

(b)(1)

(S//NF) (b)(1)

(b)(1)

(S//NF) (b)(1)

(b)(1)

(U) 3. Increased Counterintelligence and Tactical HUMINT Coverage and Support

(U) Progress is being made in augmenting existing programs in the Military Departments and in DIA, and other key defense agencies, and in aligning the DOD intelligence elements conducting counterintelligence and HUMINT operations. This should reduce duplication, leverage different talent sets and increase the value added by DOD HUMINT and counterintelligence in meeting the full spectrum of HUMINT and counterintelligence requirements, most especially those levied by the DNI. The Defense HUMINT Management Office, as described earlier, is establishing the standards for training, tradecraft, technology, architecture and operational tactics, techniques and procedures across the Department to ensure all DOD elements are working together to meet the needs of COCOMs, Military Departments, and national decision makers. The Counterintelligence Field Activity (CIFA) was created to develop and manage an integrated DOD counterintelligence program.

(S//NF) (b)(1)

(b)(1)

(b)(1)

(U) Similarly, counterintelligence was neglected throughout the 1990s. The FY 2007 MIP request will ensure an agile, innovative, proactive counterintelligence force that is responsive to the needs of warfighters and decision makers to counter clandestine and covert threats to our people, our operations, our facilities, our vital research and technology undertakings, and the infrastructures that bind our fighting forces together.

(U) 4. Fusion of all-source intelligence and operational planning

(S//NF) (b)(1)

(b)(1)

Introduction

(b)(1)

(U) Through the QDR, we also laid the groundwork for additional discussions supporting the FY 2008 program build. We will be pursuing several studies focused on the assessment of ISR requirements, again supporting a capabilities-platform-centric approach:

(U) OUSDI will be working with the Joint Staff and the UAV Center of Excellence to develop a methodology for determining JTF and COCOM sensor capability requirements more useful than the current approach of counting orbits – with more being better than fewer.

(U) Pursuant to the restructure of the Aerial Common Sensor program, the Services, along with several OSD elements and the Joint Staff, will study their joint multi-intelligence airborne ISR needs, focusing specifically on the tradeoffs among manned and unmanned platforms, and how these tradeoffs translate into requirements for recapitalizing the current Guardrail, EP-3, Rivet Joint, and Airborne Reconnaissance-Low fleets.

(U) USSTRATCOM will work with the Air Force, Navy, and OSD elements to review Global Hawk acquisitions and the U-2 retirement plans to determine how to assure that high-altitude, long-endurance, multi-intelligence surveillance and reconnaissance requirements will be satisfied during the transition. The U.S. Air Force senior leadership has assured USDI, as the Program Executive for the MIP, that there will be no gap between the retirement of the U-2 and the Global Hawk acquisitions.

(U) DCIPS

(U) The MIP represents a key organization transformation we have accomplished in Defense Intelligence. Another infrastructure area we are reforming is our personnel system – the Defense Civilian Intelligence Personnel System (DCIPS). DCIPS is under the authority of the USDI, and was established, through this committee’s initiative, to administer the benefits and policies associated with all of the DOD civilians working in intelligence. DCIPS gives the Department the flexibility to do things that otherwise are much harder through Title 5, which currently governs the rest of the Department. For example, because DCIPS is separately legislated in Title 10, we have additional opportunities to attract and retain talented intelligence professionals, reward exceptional performance, and set meaningful standards in areas such as analysis. To ensure DCIPS is implemented fully across DOD, and to ensure it operates in sync with what the DNI plans for the Intelligence Community, we have

established a new office within OUSDI to focus on DCIPS and the related personnel development and readiness issues across Defense Intelligence.

(U) Partnership with the DNI

(U) Throughout the QDR, as well as the FY 2007 budget process, the DNI’s staff has been working side-by-side with the Department. Our resources staffs in particular work in tandem on a daily basis, and this cooperation extends throughout the ODNI and OUSDI as well. For example, as we develop the JIOCs, the DNI’s staff has been integral to drafting the Execute Order, given the role of the combat support agencies in particular in the JIOC construct. In addition, we are engaged daily with the DNI staff on personnel issues and requirements and acquisition processes in an effort to align efforts wherever feasible and deconflict efforts wherever necessary.

(U) NIP/MIP Alignment

(U) One of the most significant initiatives we worked with the DNI this year is the NIP/MIP Alignment. This effort reviewed, for the first time, both the NIP and the MIP to determine whether the projects funded in each budget were properly aligned. Our intent was to develop a rational, defensible and repeatable approach to determining whether to fund a program in the NIP or the MIP. Critical to the effort was defining the criteria. Staffs agreed upon a “primary customer” approach, by which we would determine NIP vs. MIP alignment according to whether the project primarily supported the military or primarily supported national and strategic decision making. This lengthy review resulted in some key recommendations, which are reflected in the FY 2007 request.

(U) First, we are proposing to move the Maritime Intelligence Operations Center and a significant share of NGA’s resources out of the MIP and into the NIP. As a result of the proposed realignment, NGA will be 90% NIP resourced and 10% MIP resourced. The NGA piece of this recommendation is significant, because NGA historically has been funded 70% out of the NIP and 30% out of the MIP, resulting in several split-funded projects – a financial management challenge.

(U) Second, we are proposing to move the Joint Intelligence Centers and Joint Analysis Center (JICs and JAC) out of the NIP and into the MIP, recognizing these entities perform primarily operational COCOM support on a daily basis. Moreover, we are proposing that DIA manage the resources for the JICs/JAC in order to ensure protection of the resources as well as enable an enterprise approach to analysis that links the JICs/JAC with the Defense JIOC and Defense Intelligence Analysis Program (DIAP) efforts. DIA is working through the details of implementing this approach for FY 2007.

Introduction

(U) Third, we are proposing to move Foreign Counterintelligence Program resources supporting the military and the COCOMs specifically from the NIP to the MIP, again because of their operational and force protection focus.

(S//NF) (b)(1)
(b)(1)

(U) Conclusion

(U) You have before you a Military Intelligence Program for FY 2007 that is strong in many respects: in terms of capabilities, in terms of coherence and in terms of the way ahead. It is focused on the Department's leadership, the warfighters and the Combatant Commanders, as well as the DNI, ensuring they all have the targeted intelligence they need, when they need it, and in a user-friendly, accessible and actionable format – so that we can truly find and fix our threats, thereby enabling their finish. Not only do ongoing operations dictate this need, but the intelligence role in warning of impending crises necessitates it.

(U) In reviewing the FY 2007 MIP, you should know that the DNI has participated in every step of the build process, in full accordance with the Intelligence Reform and Terrorist Prevention Act. His support for the MIP has been invaluable in its establishment, and we look forward to fully implementing the MIP to effectively assess and align all intelligence capabilities in the Department.

(S//NF) (b)(1)
(b)(1)

(U) In addition, we are beginning the process of tagging each MIP project by intelligence discipline, to support capabilities analysis. We have established 12 MIP disciplines for FY 2007, into which all MIP projects will eventually be binned. This Volume includes resource exhibits for these disciplines. However, there is little standardization across the components when it comes to taxonomy and definitions, so we do not yet have complete confidence that our discipline bins are accurate and would support cross-component analysis. We are working with the components to refine the discipline assignments, and aim to provide a more robust discipline analysis in next year's CJB.

(U) Thank you for your support.

Stephen A. Cambone
Under Secretary of Defense for Intelligence
MIP Program Executive

NAVY	FY 06	FY 07	Delta	Description
				<p>on-station ranges of 2000 nautical miles. Worldwide access will be achieved by providing coverage over nearly all the world's high-density sea-lanes, littorals, and areas of national interest from its operating locations.</p> <p>(U) BAMS UAS sensor capabilities will include active imaging radar, passive optical imaging, and limited signals collection. Additionally it will have a communications relay capability linking dispersed forces in the theater of operation and serving as a communications node in the Navy's FORCENet strategy. The BAMS UAS will contribute to providing the Fleet Commander a common operational picture of the battle space day and night. It will queue other Navy assets for further situational investigation and/or attack, and after attack, will provide battle damage assessment. Data analysis will occur in real-time at shore installations via satellite reach back. Further exploitation can be conducted at shore-based exploitation sites or aboard CVNs / LHDs.</p> <p>(U) The Navy's BAMS UAS is a formal acquisition program for the development and fielding of an HAE UAV for the maritime/littoral environment, with a FY 2013 IOC. The BAMS UAS will provide Carrier Strike</p>

FY 06

FY 07

Delta

Description

Group (CSG) and Expeditionary Strike Group (ESG) Commanders with a persistent intelligence, surveillance and reconnaissance capability in concert with other manned and unmanned assets. BAMS UAS will consist of air vehicles, ground systems, sensors, and communications capabilities optimized for the maritime/littoral environment, and will be integrated with other manned and unmanned assets to perform surveillance and reconnaissance of maritime and land targets, strike support, communications relay, and other ISR missions. The BAMS UAS program is structured to meet the need for persistent ISR as other ISR platforms, specifically as the P-3 and EP-3, begin to reach life expectancy. Although BAMS UAS will not be a one-for-one replacement for any manned platforms, BAMS provides a transformational capability for the Navy.

FY06:

(U) Funding was provided from FY05 appropriation. Industry contracts were used to obtain UAV air vehicle and sensor performance data. Contracts were used to support the demonstrations and risk reductions. In addition, activities included requirement

NAVY	FY 06	FY 07	Delta	Description
PIONEER Unmanned Aerial Vehicle	(b)(1)	(b)(1)	(b)(1)	<p>(U) The Pioneer Unmanned Aerial Vehicle (UAV) provides near real-time reconnaissance, surveillance, target acquisition, combat assessment and battlefield management within Line Of Sight of a Ground Control Station (GCS) in limited weather, both day and night. Deployments around the world have supported numerous joint military operations and contingencies, including Bosnia Herzegovina, Somalia, the Adriatic, Persian Gulf operations, Desert Shield and Desert Storm, and Operation Iraqi Freedom (OIF) I, II and III. To date, the system has flown in excess of 40,074 flight hours.</p> <p>(U) The Pioneer Program addresses the critical issues facing the Pioneer system: obsolescence and mobility. The acquisition strategy uses an Engineering Change Proposal (ECP) approach, focusing on the most urgent user needs. The mobility enhancements consist of downsized trailer-mounted launchers, HMMWV-mounted GCS, and UAV transport trailers for improved mobility in-theater via C-130 aircraft. To meet the payload shortfall, the Pioneer Program will procure additional Army Shadow Tactical Unmanned Aerial Vehicle (TUAV) Plug-in Optronic Payloads. A new UEL 741 Engine will replace the current engine,</p>

Vertical Take-Off and Landing Tactical Unmanned Aerial Vehicle	(b)(1)	(b)(1)	(b)(1)	(U) The Fire Scout Vertical Takeoff and Landing Tactical Unmanned Aerial Vehicle (VTUAV) was designed to provide real-time intelligence, surveillance and reconnaissance data to tactical users without the use of manned aircraft or reliance on limited joint theater or national assets. The Fire Scout VTUAV can accomplish missions including over-the-horizon tactical reconnaissance, classification, targeting and laser designation, and battle management (including communications relay). The Fire Scout VTUAV launches and recovers vertically and can operate from all air capable ships as well as confined area land bases. Other characteristics include autonomous air vehicle launch and recovery, autonomous waypoint navigation with command override capability, and the ability to incorporate Electro-Optical/Infrared/Laser Designator-Laser Range Finder modular mission payload. Interoperability is achieved through the use of the Tactical Control System (TCS) software in the ground control station, through implementation of NATO Standardization Agreement (STANAG) 4586 and through the use of the Tactical Common Data Link (TCDL). The data from the Fire Scout VTUAV will be provided through standard DoD Command,

MC	FY 06	FY 07	Delta	Description
Small Unit Remote Scouting System	(b)(1)	(b)(1)	(b)(1)	<p>(U) The Small Unit Remote Scouting System (SURSS) is a family of sensor systems that provides Marine Corps small units, such as Infantry Battalions, with Near- Real-Time (NRT) reconnaissance and surveillance information. Specifically designed to support Expeditionary Maneuver Warfare (EMW) across the spectrum of conflict and throughout the entire battlespace, SURSS provides Marine commanders with timely intelligence necessary to make informed decisions in support of a wide range of operations including offensive maneuver, base defense and convoy operations. SURSS consists of both aerial sensors and ground sensor components. The ground sensor systems are future capabilities that begin development in FY08 for fielding in FY10.</p> <p>FY06: (U) The FY 06 estimate included (b)(1) PMC Congressional reduction and an additional reduction of (b)(1) for reprogramming due to more critical requirements. Also, the FY06 estimate includes (b)(1) PMC Title IX increase. Procurement of SURSS hardware and initial spares, prime contractor technical and logistics support and technical data package items.</p>

DIA	FY 06	FY 07	Delta	Description
Counterintelligence Support to Combatant Commands and Defense Agencies	(b)(1)	(b)(1)	(b)(1)	(U//FOUO) This project provides resources to the Military Services, the Combatant Command (COCOMs), the Defense Intelligence Agency (DIA), Counterintelligence Field Activity (CIFA), and Defense Security Service, for providing CI support to the COCOM's and Defense Agencies. It continues funding for the Joint Staff and CI analytical support at the COCOM Joint Intelligence/Analysis Centers (JIC's/JAC's). This project also provides resources for CI functional services, to include those CI activities that are designed to support other intelligence and DoD operational activities, by providing specialized defensive CI services, e.g., briefings and debriefings, to identity and counter terrorism, espionage, sabotage and related activities of foreign intelligence services directed against COCOMs and Defense Agencies and Activities. Consistent with Department efforts to make DoD intelligence more agile and responsive, this project also funds the DoD Joint Intelligence Operations Commands (JIOC), where CI personnel provide dedicated CI support to COCOM planning.

FY 06	FY 07	Delta	Description
(b)(1)	(b)(1)	(b)(1)	(S)(b)(1) (b)(1)

FY06:

(U) Re-evaluation of manpower billets resulted in an increase through USSOCOM and its component headquarters. Transfer of DHIP funds from the JMIP to TIARA resulted in an additional increase to this project. Some resources (Proc and O&M) in PE 0305183BB were moved to new Projects, Military Source Operations and THORS MACE.

(U) The Miniature Multiband Beacon (MMBEACON) program was included in the P-40 Exhibits under the Intelligence line by mistake. USSOCOM will request the move of this funding to the P-1 line item Communications Equipment & Electronics via a Form 1415 reprogramming action. Until this happens, the FY06 Procurement funds (b)(2) for MMBEACON will reside in this CJB project.

FY07:

(U) Some resources (Proc and O&M) were moved to Military Source Operations and THORS MACE.

	FY 06	FY 07	Delta	Description
Special Operations Tactical Video System	(b)(1)	(b)(1)	(b)(1)	<p>(U) SOTVS/Reconnaissance Surveillance Target Acquisition (RSTA) program employs an evolutionary acquisition strategy to meet Special Operations Forces (SOF) reconnaissance and surveillance mission requirements. The program consists of a family of interoperable digital Commercial-off-the-shelf (COTS) systems to capture and transfer near-real-time day/night tactical ground imagery utilizing SOF organic radios and global Command, Control, Communications and Computer Information (C4I) infrastructure.</p> <p>FY06: (U) Provides for camera systems, Remote Observation Posts, Tactical Recon Kits, and Sensor Kits, as well as depot support, sustainment, and program management. Congressional Plus-ups of (b)(2) support research and development efforts in nano technology, application specific integrated circuits technology, display devices with state-of-the-art night vision technology, and alternative power sources.</p>

SOCOM

	FY 06	FY 07	Delta	Description
Tactical Local Area Network	(b)(1)	(b)(1)	(b)(1)	<p>(U) The Tactical Local Area Network (TACLAN) program provides Special Operations Forces, operational commanders and forward-deployed forces advanced automated data processing and display capabilities to support situational awareness, mission planning and execution, and command and control of forces. TACLAN consists of TACLAN suites, mission planning kits (MPK), and field computing devices (FCD).</p> <p>FY06: (U) Procures five Block II Capital Equipment Replacement Plan (CERP) TACLAN network packages and miscellaneous tactical ADP equipment. Provides Enterprise Information Technology Contract (EITC) support to USSOCOM headquarters and its Components. Provides for CERP, depot hardware/software support, and program management.</p>

Military Intelligence Program Discipline Definitions

DISCIPLINE	DEFINITION
(U) All-Source Intelligence	1. (U) Intelligence products and/or organizations and activities that incorporate all sources of information, most frequently including human resources intelligence, imagery intelligence, measurement and signature intelligence, signals intelligence, and open-source data in the production of finished intelligence. 2. (U) In intelligence collection, a phrase that indicates that in the satisfaction of intelligence requirements, all collection, processing, exploitation, and reporting systems and resources are identified for possible use and those most capable are tasked.
(U) IMINT	(U) Intelligence derived from the exploitation of collection by visual photography, infrared sensors, lasers, electro-optics, and radar sensors such as synthetic aperture radar wherein images of objects are reproduced optically or electronically on film, electronic display devices, or other media.
(U) Multidisciplinary Intelligence	(U) The collection and processing of intelligence information by a system/method using two or more disciplines.
(U) SIGINT	1. (U) A category of intelligence comprising either individually or in combination all communications intelligence, electronic intelligence, and foreign instrumentation signals intelligence, however transmitted. 2. (U) Intelligence derived from communications, electronic, and foreign instrumentation signals.
(U) MASINT	(U) Technically derived intelligence that detects, locates, tracks, identifies, and describes the unique characteristics of fixed and dynamic target sources. Measurement and signature intelligence capabilities include radar, laser, optical, infrared, acoustic, nuclear radiation, radio frequency, spectroradiometric, and seismic sensing systems as well as gas, liquid, and solid materials sampling and analysis.
(U) Airborne ISR	(U) An activity that synchronizes and integrates the planning and operation of airborne sensors, assets, and processing, exploitation, and dissemination systems in direct support of current and future operations. This is an integrated intelligence and operations function.
(U) Counterintelligence	(U) Information gathered and activities conducted to protect against espionage, other intelligence activities, sabotage, or assassinations conducted by or on behalf of foreign governments or elements thereof, foreign organizations, or foreign persons, or international terrorist activities.
(U) HUMINT	(U) A category of intelligence derived from information collected and provided by human sources.
(U) SCI & Related Comms	(U) Those activities that provide Sensitive Compartmented Information (SCI) communications and information services.
(U) Operational Support	(U) Those activities that provide general, financial, and administrative functions, including logistics, comptroller, legal and audit functions, personnel management, facilities costs (utilities, leases, maintenance, and purchase), basic and applied research and development activities required to support intelligence operations, that support intelligence operations, public information, medical services, supply operations, PCS and non-operational travel, base services, and property disposal. Resources dedicated to another Intelligence Discipline should not be included in this category.
(U) Training	(U) Activities related to Intelligence education and training.
(U) Space ISR	(U) An activity that synchronizes and integrates the planning and operation of space sensors, assets, and processing, exploitation, and dissemination systems in direct support of current and future operations. This is an integrated intelligence and operations function.
